

# WHO HAS ACCESS TO YOUR HOMEOWNER'S DATA AND CASH?

If you're not sure, your HOA can become a statistic.

From home addresses to bank account information, your HOA holds some of the most sensitive information of Americans - and is also one of the riskiest industries for exposure to a cyber attack. If you're partnered with a software system that lacks a sufficient security program and regular program updates, you pose a major risk for your homeowners.

Our company is partnered with CINC Systems, a best-in-class and Veracode-verified solution that protects homeowner data by focusing on all facets that breach security measures: the product, the environment, and company policies and procedures. Connect with us to learn more.

OVER  
**164 MILLION**  
AMERICANS HAD  
DATA COMPROMISED  
LAST YEAR.

Through CINC Systems, our company provides HOAs essential security measures such as:

**Multi-Factor Authentication** makes it harder for an attacker to gain account access

**Private Cloud Hosting Environment** enhances speed while reducing risk of a data breach

**Endpoint monitoring** tracks suspicious activity in real time 24/7
